

Test Plan 5 — Organuz API Contracts (Supabase / PostgREST)

Project	organuz-api
Specs	tests/organuz-api/contracts/projects-contract.spec.ts
Default filter	@other-smoke
Target	Organuz Supabase backend — /rest/v1/projects , edge functions (public anon key)
Client	src/api (OrganuzApi)
Cases	1
Skips	None — anon key baked into config.json
Skill	organuz-api-tests

Scope

Contract-level checks against the Organuz Supabase/PostgREST backend using the public anon key. The default suite asserts the `projects` REST resource honors its schema contract. No writes, no privileged access — RLS keeps the anon key read-only.

Preconditions

- Public internet access to the Supabase host; anon key from `config.json` .

Cases

ID	CASE	ASSERTS	ALLURE	TAGS
API-01	GET /rest/v1/projects honors the projects schema contract	Response rows conform to the expected projects schema/shape	Epic: Organuz API · Feature: Projects contract · Story: projects resource schema	@organuz-api @contract @other-smoke

Run

```
npx playwright test --project=organuz-api
```

Notes

- Default-filtered to @other-smoke ; additional @organuz-api / @contract specs (edge-function preflights, RLS checks) only enter the default suite when tagged @other-smoke . Adding one changes the documented count (1) — update CLAUDE.md and the parity skill.
- Keep the anon key public/read-only; never introduce writes or a service key here.
